Professional Summary

Backend Engineer with 6+ years of experience designing and building large-scale systems, microservices architectures, event-driven platforms, and cloud-native applications.

Strong expertise in Golang, Kafka, Redis, Kubernetes, Docker, Terraform, PostgreSQL, and scalable backend architecture. Proven experience developing high-performance systems handling large volumes of data, real-time event processing, secure service communication through gRPC, and production-grade CI/CD pipelines.

Hands-on experience implementing security best practices, vulnerability scanning, secure coding standards, compliance-driven development, infrastructure automation, and large-scale backend optimization.

I have a strong interest in cybersecurity and enjoy working on systems involving security, infrastructure, networking, observability, reliability, and large-scale distributed architectures. Passionate about learning modern security technologies, secure software development practices, and building products that help protect critical systems and organizations.

Technical Skills

- Golang (Primary), TypeScript, Rust, Dart, Nodejs
- PostgreSQL, MongoDB, Redis, Aerospike, Firebase
- Apache Kafka, Google Pub/Sub, Azure Service Bus
- Docker, Kubernetes, Terraform, GitHub Actions
- AWS, GCP, Azure
- SonarQube,BlackDuck

Professional Experience

Senior Consultant – IKEA (Capgemini)

Jun 2025 – Present

- Leading backend development for a large-scale warehouse management platform supporting multiple distributed services.
- Designed and maintained event-driven microservices communicating through Google Pub/Sub and Azure Service Bus.
- Architected message routing mechanisms enabling seamless communication across heterogeneous messaging infrastructures.
- Led a backend team of 8 engineers while driving architecture decisions, sprint planning, code reviews, and delivery.
- Improved service reliability, scalability, and maintainability through clean architecture and distributed systems best practices.
- Worked extensively on large-scale data orchestration, validation pipelines, and service integration.

Technologies: Golang, Kubernetes, Docker, PostgreSQL, Pub/Sub, Azure Service Bus, Terraform

Senior Consultant – Mercedes-Benz Research & Development (Capgemini)

Oct 2023 – May 2025

- Designed and developed backend services processing terabytes of manufacturing data weekly.
- Built scalable gRPC-based communication layers for internal distributed systems.
- Developed Kafka-driven event processing workflows for real-time service coordination.
- Improved backend throughput through Redis caching and performance optimization initiatives.
- Reduced deployment cycle time through Kubernetes, Docker, and Terraform automation.
- Integrated S3-compatible object storage systems, reducing retrieval latency .
- Implemented secure CI/CD pipelines including BlackDuck security scanning and compliance enforcement.
- Achieved zero open compliance issues through proactive vulnerability remediation and secure development practices.

Technologies: Golang, Kafka, PostgreSQL, Redis, Kubernetes, Docker, Terraform, gRPC

Backend Developer – HDFC Bank

Aug 2022 – Sep 2023

- Re-architected and migrated critical Debit Card Services from Java to Golang.
- Developed highly available backend services supporting card lifecycle management.
- Built real-time event propagation mechanisms using Google Pub/Sub.
- Leveraged Aerospike and Redis to optimize storage and reduce latency.
- Conducted regular security audits and vulnerability reviews, reducing incidents by 30%.
- Implemented infrastructure automation using Kubernetes and Terraform.

Technologies: Golang, Redis, Aerospike, Kubernetes, Terraform, Pub/Sub

Golang Developer – Logicloop

Feb 2022 – Aug 2022

- Modernized legacy monolithic systems into distributed microservices.
- Increased system throughput through service decomposition and optimization.
- Implemented Kafka-based asynchronous communication patterns.
- Built gRPC service communication layers.
- Automated CI/CD workflows and increased deployment frequency.
- Improved observability using Grafana dashboards and monitoring systems.

Technologies: Golang, Kafka, gRPC, Docker, Grafana

Full Stack Developer – CBNITS

Feb 2020 – Feb 2022

- Developed financial and healthcare platforms from the ground up.
- Built backend APIs using Golang and Gin Framework.
- Integrated banking APIs and optimized transaction processing performance.
- Established CI/CD pipelines and engineering best practices.
- Mentored junior developers and conducted code reviews.

Fikrbot – Intelligent Document Verification Platform

Technologies: Golang, PostgreSQL, Redis, Next.js

- Built a document verification platform focused on compliance and validation workflows.
- Designed automated verification engines capable of cross-document validation and anomaly detection.
- Developed multi-stage extraction and validation pipelines.
- Implemented fraud detection-oriented matching workflows across invoices, permits, and shipment documents.
- Built scalable backend services supporting multilingual document processing.

Medzimi – Healthcare Ecosystem Platform

Technologies: Golang, PostgreSQL, MeiliSearch, Bun, Hono

- Built a complete healthcare platform serving patients, doctors, pharmacies, and laboratories.
- Developed scalable backend services and search infrastructure.
- Implemented AI-assisted document processing and recommendation workflows.
- Designed architecture supporting high availability and extensibility.

Education

Bachelor of Technology – Computer Science & Technology

Bipradas Pal Chowdhury Institute of Technology

Certifications

- Google Cloud Professional DevOps Engineer (In Progress)
